

Data Sheet – Fire Chief Electronic Systems

Lifeline Fire Chief electronic fire safety systems are specifically designed to provide fail-safe fire protection for performance road cars.

Fire Chief is available with a choice of extinguishing agents - either Zero 360 gas or Zero 2000 foam. Should you be involved in an incident where an engine fire occurs, simply lift the hinged cover on the operating button, depress the push button switch and the fire fighting agent will be jetted through the engine compartment via the strategically positioned nozzles. This push button has a clear, hinged cover to prevent accidental firing. Once activated the system will totally discharge, extinguishing the flames and deterring re-ignition. This system can be made fully automatic with the addition of a fusible link thus protecting your vehicle even when there are no occupants.

Lifeline Fire Chief is manufactured with a high quality aluminium reservoir, mounted on a neat mounting bracket with twin straps, and fits discretely into the engine compartment, with the firing button fitted in the passenger compartment within easy reach of the driver.

Fire Chief systems are supplied complete with all components and instruction manual necessary for installation and is available in either polished aluminium or red finishes.

Fire Chief systems are designed to operate through 360 degrees. The benefits of this are two-fold. Firstly, it allows the system to be mounted in any orientation - on its side, upright or at an angle, thus making installation easier. More importantly it allows the system to fully discharge its contents, even if the vehicle is on its side or inverted.

Key Lifeline Fire Chief features are:

- Ultra Lightweight and compact
- Clean Halon replacement, environmentally acceptable
- Highest quality components
- Constant discharge in any orientation
- Excellent fire knock down and fire out capabilities
- Two year service cycle
- Lifeline motorsport extinguisher systems are the choice of world championship winning constructors and are FIA approved

Specifications

Description:	Fire Chief Electronic Extinguisher System
Part Nos:	LL108-100-001 Fire Chief Zero 2000 LL108-200-001 Fire Chief Zero 360
Contents:	1.0litre Zero 2000 foam, or 1.0kg Zero 360 gas
Discharge System:	Electrical, Stored Pressure
Cylinder:	Aluminium
Size (mm):	See schematic drawings below
Weights:	Cylinder (filled): Zero 2000 - 1.7kg, Zero 360 - 1.75kg
Operating Temperatures:	-15 to +60 degrees C
