Data Sheet – Roll Cage Padding

Lifeline sets new standards of in-cockpit protection with its advanced roll cage padding specification.

Developed for international and national motorsport Lifeline roll cage padding is homologated for competition use by the FIA and therefore also fully compliant with MSA requirements. Specifically designed to meet the extreme demands of motorsport the Lifeline roll cage padding has been subjected to rigorous FIA laboratory impact and flame retardancy testing. In anticipation of any future regulation changes Lifeline has designed the padding to perform well in excess of the current minimum requirements.

Supplied in standard 600mm lengths the padding can be readily cut to fit and is supplied with heavy duty self adhesive tape for ease of installation. Available in all popular cage tube sizes – 32mm, 40mm, 45mm, 50mm and 60mm sizes - to make this the most comprehensive range on sale today.

Lifeline's reputation for attention to detail ensures the best value product without compromising quality.

Lifeline is ISO9001 accredited and is an Investor in People employer
